Immediate Release

Driveline Product Expansion...

PAJA Automotive is proud to announce the expansion of their Universal Joint and Centre Bearing programme, as part of the increasing Driveline range.

The expansion of the Universal Joint and Centre Bearing range perfectly compliments PAJA's already well established undercar range, specialising in steering & suspension components.

Having started with a limited range in 2004, the Universal Joint and Centre Bearing programmes have now expanded to cover the majority of Australian aftermarket requirements.

PAJA Automotive's Tania Allatt says "PAJA's Universal Joint and Centre Bearing programmes have been selling in the market place for some time now, and have built up a very good reputation with customers. The range is extensive, the stocks are great and the pricing is competitive".

As with all the products PAJA distribute, the precision manufactured Universal Joints and Centre Bearings are of the highest quality. The products included in this range are designed and manufactured to exceed OE specifications, and are sourced from some of the best manufacturers worldwide.

To assist customers further, PAJA have developed new Universal Joint and Centre Bearing Application Guides featuring all of the new applications in the expanded ranges.

For your copies of the new Universal Joint and Centre Bearing Application Guides please contact PAJA Automotive on 1300 55 90 86 or fax your request to FREE FAX 1-800 2 4 6 8 10 or email to sales@oem-products.com
