One Giant Leap Forward...

Steering & Suspension specialist PAJA Automotive has taken a giant leap forward with the publication of the company's new WEB SITE – **www.oem-products.com**

Featuring new product outlines and downloads, the web site also boasts a new ONLINE PRODUCT FINDER for steering & suspension components.

PAJA's steering & suspension components catalogues have long been accepted as the industry benchmark, and the new ONLINE PRODUCT FINDER has raised the bar even further.

Designed from scratch, the ONLINE PRODUCT FINDER is simple to use with easy drop down menus for make, model & year and includes all of the information in PAJA's current Edition 4 Steering & Suspension hardcopy catalogue – in addition to a significant number of added extras, new listings and supplementary information.

The new ONLINE PRODUCT FINDER will be updated regularly with new information, parts listings and applications as they become available. This means customers will constantly have the most up to date steering & suspension listings available on hand for reference.

PAJA Automotive Manager Tania Allatt says that the new ONLINE CATALOGUE FINDER will make searching for the right steering and suspension component a fast and simple process.

"The new online catalogue finder and web site, in conjunction with our customer service sales focus and new phone sales hotline, is all part of our national strategy to make it easier for our customers" she said.
